System analysis can be defined as a deep analysis of a part of a structure of a module which is been designed before. System design means to make any module or a part of the structure from scratch and build it completely without estimation. System analysis is the process which is done on the existing model or the newly created model.

Systems analysis is an iterative process that continues until a preferred and acceptable solution emerges. (e)System Design Based on the user requirements and the detailed analysis of the existing system, the new system must be designed. This is the phase of system designing. It is the most crucial phase in the develop- ments of a system.
