Demodectic Mange - Ivermectin Use for Treatment

The dose for 1% ivermectin is 0.05 ml for a kitten weighing at least four pounds. This is a VERY tiny amount (one drop), so make sure your syringe has a total volume of only 0.5 ml (insulin syringe). Getting ivermectin to draw into an insulin syringe is an ordeal in itself (it is a very viscous solution), If kittens under that weight are to be ...

Use of Ivermectin to Control Ear Mites, Body Mites, and ...

The usual dose is 150 micrograms (mcg) per kilogram (kg) (68 mcg per pound) of body weight as a single dose. The treatment may be repeated every three to twelve months. Children—Dose is based on body weight and must be determined by your doctor.
