Topology

Let A be a subset of X .

Suppose that for each $x \in A$ there is an open set U containing x such that $U \cap A$ is open in X . Show that A is open in X . Solution: Let $\mathcal{C} = \{U \cap A \mid U \text{ open in } X, x \in U \text{ for some } x \in A\}$.

Suppose $U \cap A = \bigcup_{i \in I} U_i \cap A$. Since X is a topological space, $U \cap A$ is open in X . Clearly if $x \in A$, then $x \in U$

Munkres also does the Smirnov Metrization Theorem which relies more on paracompactness. But Kelley does Moore-Smith convergence and nets-a way of doing topology with sequences, and only gives a reference for Smirnov. The Munkres text gave a brief introduction to homotopy and the fundamental group- Kelley none.

James R. Munkres Let X and Y denote a single set in the topologies τ_1 and τ_2 , respectively; let Z and W denote a single set in the topologies τ_3 and τ_4 , respectively. Assume these sets are nonempty. (a) Show that if $\tau_1 \times \tau_3$ and $\tau_2 \times \tau_4$, then the product topology on $X \times Z$ is finer than the product
