HTML tr tag - W3Schools
Definition and Usage. The <tr> tag defines a row in an HTML table. A <tr> element contains one or more <th> or <td> elements.

Python Try Except - GeeksforGeeks
First try clause is executed i.e. the code between try and except clause. If there is no exception, then only try clause will run, except clause is finished. If any exception occurred, try clause will be skipped and except clause will run. If any exception occurs, but the except clause within the code doesn't handle it, it is passed on to the outer try statements.

Web Scraping using Python - DataCamp
Web Scraping using Python In this tutorial, you'll learn how to extract data from the web, manipulate and clean data using Python's Pandas library, and data visualize using Python's Matplotlib library. Web scraping is a term used to describe the use of a program or algorithm to extract and process large amounts of data from the web.

Patterns in Python | Different Types of patterns and examples
In the python language, we can create the patterns by using the For Loops. Here we can manipulate them for loops and with that, we can print the statement in order to have a unique pattern such as stars, Numeric and Character pattern. We can use any of the python compilersavailable on the market to execute programs. Types of Patterns and Examples
