A convenient unit for measuring pressure is the bar, where $1 \text{ bar} = 10^5 \text{ N/m}^2$. The pressure of 1 standard atmosphere is very nearly 1 bar: $1 \text{ atm} = 1.0133 \text{ bars}$. In sound we use a logarithmic scale of intensities since the sensitivity of the ear is roughly logarithmic.

Sound waves: What others are saying about Saturday's Husker game ... "Going into this week we watched a lot of film on them and watched how they set and how they move as an O-line and a unit. I ...

Sound waves: What others are saying about Saturday's ...

Sound is transmitted when hard objects, like hard-soled shoes, furniture, dropped objects, or even dog claws impact a hard surface, like tile or stone. Without anything to absorb it, sound waves can spread, multiply, and echo off the walls, amplifying even a small sound to a distracting crescendo with the right acoustics.
