You can see now that the ball's final momentum is the sum of the ini-tial momentum and the impulse. If the tennis ball was at rest before it was hit, its final momentum is equal to the impulse, 1.4 kg m/s . $p = mv$ 1.4 kg m/s If the ball has a mass of 0.060 kg , then its velocity will be 23 m/s . $v = p/m$ 23 m/s 0.060 kg 23 m/s 202 Momentum and Its Conservation

Momentum (p): Mass times velocity. ($\text{kg}\cdot\text{m/s}$) Mass (m): A quantity that describes how much material exists, or how the material responds in a gravitational field. Mass is a measure of inertia. (kg) Velocity (v): Displacement divided by time (m/s) Angular momentum (L): A vector quantity that represents the tendency of an object in circular or rotational motion to remain in this motion.

A quantity is said to be conserved when its value does not change over time The statement 'momentum is conserved' simply means that the momentum is fixed in value.

What does it mean when it is said that the momentum is ...

Momentum conservation applies to a single object, but it's a lot more interesting to look at a situation with at least two interacting objects. If two objects (a car and a truck, for example) collide, momentum will always be conserved. There are three different kinds of collisions, however, elastic, inelastic, and completely inelastic.

Collisions in one dimension. Momentum is conserved during a collision. The momentum of the system before (i) and afterwards (f) will be the same. In equation form, for a collision between two objects (1 and 2): $p_{1,i} + p_{2,i} = p_{1,f} + p_{2,f}$. $(m_1v_1)_i + (m_2v_2)_i = (m_1v_1)_f + (m_2v_2)_f$.

Angular momentum, like energy and linear momentum, is conserved. This universally applicable law is another sign of underlying unity in physical laws. Angular momentum is conserved when net external torque is zero, just as linear momentum is conserved when the net external force is zero.

When is momentum not conserved? | Study.com

When we deal with momentum, conservation usually means one object transferring its momentum to another after a collision (think boulder to Jones); energy is again slightly more abstract. Conservation of energy can involve transfer of energy in collisions, but also covers the conversion of energy into different forms within the same object.
