Volume Components¶. For more control, volume shading components can be manually combined into a custom shader setup. Volume Absorption will absorb part of the light as it passes through the volume. This can be used to shade for example black smoke or colored glass objects, or mixed with the Volume Scatter node.

Volumes — Blender Manual

Detail can be added to the shape of a surface with displacement shaders. To create displacement, connect a Displacement or Vector Displacement node to the displacement input of the Material Output node. Procedural, painted or baked textures can then be connected to these nodes.
