Developmental psychology is the scientific study of how and why human beings change over the course of their life. Originally concerned with infants and children, the field has expanded to include adolescence, adult development, aging, and the entire lifespan. Developmental psychologists aim to explain how thinking, feeling, and behaviors change throughout life.

There are few studies in the history of psychology as renowned as the Stanford prison experiment (SPE) (Haney, Banks, & Zimbardo, 1973), and few psychologists as recognizable as the study's principal investigator, Philip Zimbardo. The SPE has influenced music, film, and art and has served as a testament to the power of "bad" systems and a counterbalance to "bad" person accounts of ...

Adolescence (from Latin adolescere 'to grow up') is a transitional stage of physical and psychological development that generally occurs during the period from puberty to legal adulthood (age of majority). Adolescence is usually associated with the teenage years, but its physical, psychological or cultural expressions may begin earlier and end later. For example, puberty now typically begins ...

The formal study of adolescent psychology began with the publication of G. Stanley Hall's Adolescence in 1904. Hall, who was the first president of the American Psychological Association, viewed adolescence primarily as a time of internal turmoil and upheaval ( Sturm und Drang). This understanding of youth was based on two then-new ways of understanding human behavior: Darwin's evolutionary ...

Anxiety is an emotion characterized by an unpleasant state of inner turmoil, often accompanied by nervous behavior such as pacing back and forth, somatic complaints, and rumination. It includes subjectively unpleasant feelings of dread over anticipated events. [need quotation to verify] Anxiety is a feeling of uneasiness and worry, usually generalized and unfocused as an overreaction to a ...
